

Perten – Portable Grain Analyzer

Inframatic 8800

Near-infrared (NIR) grain testing has been a fixture at large elevators and grain processors for years. With the use of newly available technology, Perten Instruments is excited to introduce a tester **designed specifically for on-farm use**. This rugged meter is ideal for testing grain for moisture, protein and oil.

Maximize your profit

GPS & Protein Maps

The Inframatic 8800 is equipped with a GPS so you can create protein maps of your fields. Protein Maps allow farmers to extract additional profit by identifying pockets of premium grain. Topography, fertilization, and run-off are known to cause variation in protein content within a field. Make fast harvesting and binning decisions to manage your grain quality.

Get the most for your grain

Fast Portable Grain Testing

Deliver the right grain to the right buyer. Test your grain as it's going into storage and as it's going into the truck. Send the highest quality grain to those willing to pay premiums.

| Perten | Inframatic 8800 |
|---------------|-----------------------|
| ANALYSIS TIME | ~90 s |
| SAMPLE SIZE | ~400 ml |
| DIMENSIONS | 14" W X 10" D X 11" H |
| WEIGHT | 15.5 lbs |
